UME English School & Mount Mary Mission School

PURPOSE OF THIS DOCUMENT

Walking through what the system does and what it means for your schools

TARGET TO GO LIVE

90-120 Days (about 3 Months)

1. The Problem We're Solving

Right now, a lot of daily school work happens through Excel sheets, registers, and separate systems that don't talk to each other. Attendance is marked in one place, fees are tracked in another, and results are prepared separately — with a lot of manual copying in between.

This creates extra work for your staff, makes it hard to get a quick answer (“How many students haven't paid this month?”), and leaves parents constantly calling the school for updates they should really be able to see themselves.

This proposal is about replacing that scattered way of working with a single digital system — built specifically around how UME English School and Mount Mary Mission School actually function today, not a generic template.

Why this matters for you: Less manual work for your staff, faster answers for you, and a more professional experience for every parent — without changing how your schools are run day to day.

2. One System, Two Schools — Each With Its Own Identity

UME English School and Mount Mary Mission School will each get a system that feels completely their own — their own login, their own branding, their own rules, their own website. Nobody at Mount Mary will ever see UME's data, and nobody at UME will see Mount Mary's.

Behind the scenes, both schools run on the same well-built foundation. This is what makes it possible to give both schools a complete, professional system while keeping things realistic and manageable — instead of building two completely separate systems from zero.

Why this matters for you: Two schools, two identities, two logins — but one system that's faster to build, easier to maintain, and easier to improve for both schools together, going forward.

3. A Dashboard for Everyone

Every person in your schools — from the Principal to a class teacher — gets a screen that shows exactly what matters to them, and nothing they don't need to see.

Admin

Full control from one place — students, staff, classes, fees, attendance, exams, notices and admissions — instead of switching between registers, Excel sheets and paper files to get one job done.

Principal

A bird's-eye view of the whole school — attendance trends, fee collection, academic performance and discipline — without needing to ask three different people for three different reports.

Teacher

A simple screen for their own classes only — attendance, homework, marks and student notes — so teachers spend their time teaching, not filling registers.

Fee / Accounts Staff

A clear, always up-to-date picture of who has paid, who hasn't, and where the money has gone — without maintaining a separate Excel file alongside the receipt book.

Why this matters for you: Everyone gets exactly the information they need to do their job well — and nobody has to hunt for it or wait for someone else to send a report.

4. Every Student's Complete Record, In One Place

From the day a student is admitted, everything about them lives in one profile — their class, their parents' contact details, their documents, their history — instead of being spread across an admission register, a fee file and a class list.

If a student changes class or leaves the school, that history is preserved, not lost.

Why this matters for you: No more asking three different people to find one student's information.

5. Every Parent's Complete Family View

Many parents have more than one child in the school — sometimes even across both UME and Mount Mary. This system recognises that: a parent with two children can see both from one account, instead of needing two separate logins or two separate conversations with the school.

Why this matters for you: Parents feel like the school knows their whole family, not just one child's file.

6. Attendance — Marked Once, Seen By Everyone

A teacher marks attendance once for their class. From that single entry, the Principal sees the day's overall attendance, and the parent sees it too — the same afternoon, not at the end of the month.

Why this matters for you: One entry, no repeated data entry, and parents stop needing to call and ask whether their child reached school.

7. Tracking Student Growth, Not Just Marks

Beyond exam marks, the system can track the everyday things that actually show a student's growth — habits, behaviour, participation — using whatever criteria Mount Mary or UME already follow, rather than a generic one-size-fits-all form.

Why this matters for you: A fuller picture of each child that parents can see building up through the year — not just a mark sheet twice a year.

8. Fee Management — No More Guessing Who Has Paid

Every student's fee structure, due dates, discounts and payments live in one place. At any moment, your Fee/Accounts staff can say exactly who has paid, who hasn't, and how much is outstanding — instead of cross-checking a register against a cash book.

UME and Mount Mary can each have their own fee structure and installment pattern — this doesn't need to be identical between the two schools.

Why this matters for you: Faster fee collection, fewer disputes, and no more end-of-month scramble to work out the outstanding list.

9. Daily School Accounts, Without the Manual Register

A simple day-to-day account of cash and bank movement — money in, money out, expenses — kept digitally instead of in a physical register. This isn't meant to replace a full accounting system; it's meant to replace the manual Hisaab-Kitab work that's currently eating up staff time.

If an entry ever needs correcting, it's never simply deleted — it's reversed with a reason, so there's always a clean, honest trail of what actually happened.

Why this matters for you: A trustworthy daily money record, without needing someone to maintain a register by hand every evening.

10. Exams, Marks & Report Cards — Done Automatically

Marks are entered once, and the system does the rest — totals, grades, and a properly formatted report card ready to print. No manual averaging, no formatting mark sheets by hand every term.

Why this matters for you: Hours of manual report-card preparation, turned into a few clicks.

11. Discipline — Documented and Fair

Incidents, warnings and actions get recorded properly, with a history — so if a pattern needs to be discussed with a parent, you have the facts on hand instead of relying on memory.

Why this matters for you: Fair, consistent, and easy to explain to a parent when it actually matters.

12. Recognising Good Students

Academic achievement, attendance, discipline, 'student of the month' — whatever your schools already recognise students for can be tracked and celebrated through the system.

Why this matters for you: Motivates students, and gives parents something positive to see too — not just marks and warnings.

13. The Parent Portal — Parents Always in the Loop

Parents get their own simple login to see their child's attendance, homework, results, fee status and school notices — whenever they want, without calling the office.

Why this matters for you: Fewer phone calls to the school office, and parents who feel genuinely informed and involved in their child's day.

14. A Real Website for Each School

Both UME and Mount Mary get their own professional public website — their own look, their own content, their own information about admissions, faculty and facilities. A real online presence for families researching the school before they even make a call.

Why this matters for you: First impressions matter — this is often the very first thing a prospective parent sees of your school.

15. Update Your Website Yourself, Anytime

Whoever manages the school can update the website's content — notices, achievements, gallery photos, admission information — without calling a developer or waiting days for a small change.

Why this matters for you: Your website stays current, without ongoing dependency on outside help for every small update.

16. Never Lose an Admission Enquiry Again

When a parent enquires through the website, that enquiry doesn't just sit in an email inbox — it flows straight into the system, where it can be followed up on and tracked until it becomes an admission (or doesn't).

Why this matters for you: No enquiry gets forgotten, and you can actually see how many enquiries turn into admissions.

17. Automatic Reminders & Notifications

Fee reminders, attendance alerts, exam notices and general school communication can go out automatically — by WhatsApp, SMS, email or in-app — instead of relying on a printed circular that may or may not reach every parent.

Why this matters for you: Parents get told what they need to know, when they need to know it — without your staff manually messaging each one.

18. Moving On From Excel Sheets

Before anything is built, we'll go through your existing Excel files and manual workflows one by one, and decide honestly what should be replaced, what should be automated, what should simply be carried over as-is, and what genuinely isn't needed anymore.

Why this matters for you: A clean, deliberate move away from Excel — not a rushed one that loses data or breaks a workflow you actually rely on.

19. We Won't Throw Away What Already Works

Before we finalize anything, we will properly review your existing ERP and current processes — what's being used, what isn't, and what your staff have built workarounds for. If something is genuinely important, it gets carried forward and prioritised.

Why this matters for you: You won't lose a workflow your school depends on, just because it wasn't mentioned on day one.

20. One-Glance Reports for Every Level of Management

Instead of asking someone to pull a report, the Admin, Principal and Fee/Accounts team each get a dashboard that already shows the numbers that matter to them — attendance, admissions, fees, expenses — kept up to date automatically.

Why this matters for you: Decisions based on today's numbers, not last week's Excel export.

21. Works on Any Device, Anywhere

Staff and parents can use the system from a desktop, laptop, tablet or phone — nothing special to install. The parent-facing side works like a mobile app, without anyone needing to download anything from an app store.

Why this matters for you: Nobody is stuck at a desk to check something — the school is accessible from wherever people already are.

22. How Long Will This Take

The target for this first phase is approximately 90–120 days (about 3 months), once we have access to your existing records and the information we need. A project of this size — two schools, full staff systems, parent portals and two websites — needs a proper build-and-test cycle, not a rushed one.

The exact pace depends on how quickly Excel data and existing ERP access are made available, and how fast feedback comes back during testing.

Why this matters for you: A realistic, honest timeline — not an inflated promise that quietly slips for months.

23. What Happens After Launch

Launch isn't the end — there's a proper handover period where every role is tested, every school's data is checked, and your staff are walked through how to actually use the system day to day. Ongoing support continues to be available after that, to keep things running smoothly.

Why this matters for you: You're not left alone with a new system on day one — there's real support built in around it.

24. Where This Can Grow In the Future

This is deliberately built so more can be added later without starting over — payroll, library, transport, biometric attendance, a dedicated mobile app, WhatsApp automation, deeper analytics, even additional school branches.

Why this matters for you: What you invest in now doesn't become outdated the moment your schools grow — it's a foundation, not a dead end.

25. What You Will Walk Away With

At the end of this phase, both UME English School and Mount Mary Mission School will have their own complete digital identity — their own staff system, their own parent experience, and their own public website — while quietly sharing one well-built, easy-to-maintain foundation underneath.

- A complete staff system for both schools — Admin, Principal, Teacher and Fee/Accounts views
- A branded Parent Portal for each school
- A professional public website for each school, that the school can update itself
- Attendance, Fees, Exams, Discipline and Awards — all connected to each other
- Automatic reminders and notifications to parents
- A clean, deliberate move away from Excel sheets
- Real support and training after go-live

This document is meant to walk through how the system will work and what it actually means for your schools, day to day. Once you're comfortable with the approach, we'll walk through the investment and payment plan separately.
